

READ ME :

One need to create a .env file in the root of the project and add the following:

```
MAPBOX_TOKEN=<>
CLOUDINARY_CLOUD_NAME=<>
CLOUDINARY_SECRET=<>
CLOUDINARY_KEY=<>
```

For the above information one need to :

- Create a cloudinary account to get an API key, secret code and cloud name.
- Create an account on mapbox to get mapbox token

Run **npm install** on the terminal to install all the dependencies required .

Open mongod in one shell and mongo in another.

Run **db.user.find({})** in mongo shell and copy user id of any one user whom you want to be the owner of all funplaces in database and paste it in seeds/index.js in place of author user ID.

Run **nodemon app.js** in the terminal with the project Then go to localhost:3000.
